

## *Creating Lean Methods and Tools*

### **Designed for:**

- Any organization implementing Lean
- Leaders and Teams responsible for cross-functional business process improvement efforts
- Organizations interested in creating their own precision tools and methods using a Lean principles-based approach
- Organizations targeting any of the following processes for improvement: Supply Chain Processes, Sales & Operations Planning, Lean Production Management, Lean Material Management, Kanban, Lean Order Management and Scheduling

### **Description:**

Designed to make your Lean implementation efforts easier to manage and more creative, this session is an onsite workshop explaining Lean process development (architecting) principles, practices, tactics, and tools.

### **What Attendees will Learn:**

- Traditional BPI vs. Lean process development (architecting)
- Important conditions for boosting success
- Putting together the right team
- Three phases and 10 steps of Lean process development
- Facilitator, champion, and technical characteristics and roles

### **Who Should Attend?**

- Lean leaders
- Improvement leaders
- Technical managers responsible for Lean
- Department and functional managers accountable for Lean success

### **Agenda**

8:00-9:00	Waste-free Lean
9:15-11:45	Organic development
1:00-3:30	Designing your own precision tools and methods
3:45-5:30	Phases of development, start to finish
